

FILTERTHERM ROI TOOL INFO SHEET

This document's purpose is to provide more details & background information about the **Filtertherm ROI Tool**. **This version of the ROI Tool is intended for FLEET customers.**

The primary goal of the **ROI Tool** is to provide you with a reasonable estimate of the potential savings and costs based on your individual fleet size and a few other key factors. This should give you a good idea which DPF cleaning system is best for your budget and operational requirements.

For the "**Choose your DPF Cleaning Equipment system**" option we have used current **MSRP pricing** for the **Thermal** and **Aqueous** systems. Actual system cost may vary depending on the equipment configuration ordered, shipping costs, discounts, incentives, etc. Contact a Filtertherm representative for a more exact quote.

NOTE: We have used some general estimates for the overhead costs a fleet operation might have related to the ongoing operation of our DPF Cleaning Equipment. For the **ROI Tool**, we have factored in a cost of \$10 per cleaning.

This should go without saying. We highly recommend each customer evaluate and validate their own ROI based on the **actual** DPF cleaning schedules, fees, labor, & overhead costs for your operation. As well as discuss options, advantages, and any questions with an experienced **Filtertherm** representative.

Lastly, there are often other logistical advantages and savings that can be realized by **cleaning DPFs in-house** such as combining cleanings with other scheduled maintenance for less truck downtime, better tracking, more control of the filter cleaning quality, and faster turnaround time.

Feel free to contact us with any questions about the **ROI Tool** or our **DPF Cleaning Equipment**.

Sincerely, **The Filtertherm Team**
